

- ☐ Compact design with integrated
- ☐ High reliability
- ☐ Simple replacement of the exciting coils including electronics without opening the hydraulic circuits
- ☐ Continuous flow control in both directions
- ☐ Installation dimensions to DIN 24 340 / ISO 4401 / CETOP RP121-H

Functional Description

The proportional directional valve consists of a cast-iron housing, a special control spool, two centering springs with supporting washers and one or two proportional solenoids. A control box, which comprises one or two electronic control cards, depending on the number of the controlled solenoids, can be mounted onto either solenoid. With the model with two solenoids, the solenoid mounted apposite the control box is connected with the box by means of a DIN connector, a two-cored cable and a bushing. The connection of the control box with the supply source and with the control signal is realized by means of a 4-pin connector, type M12 x 1. The solenoid coils, including the control box, can be turned in the range of $\pm 90^\circ$. The electric control unit supplies the solenoid with current, which varies with the control signal. The solenoid shifts the control spool to the required position, proportional to the control current.

The electronic control unit provides the following adjustment possibilities: Offset, Gain, rise and drop-out time of the ramp generator, frequency (2 frequencies) and amplitude of the dither signal generator. The correct function of the control unit is signaled by LED-diodes. Stabilized voltage +10V (+5V for voltage 12V) is also available for the user. By the use of this voltage, a voltage control signal can be made by means of a potentiometer $\geq 1 \text{ k}\Omega$.

The electronic control card enables voltage or current control to be used, according to the positions of the switches SW1 to SW3 (see table on page 6).

The basic surface treatment of the valve housing is phosphate coated, the operating solenoids are zinc coated.

Technical Data

Nominal size	mm	06
Maximum operating pressure at ports P, A, B	bar	350
Maximum operating pressure at port T	bar	210
Hydraulic fluid	Hydraulic oils of power classes (HL, HLP) to DIN 51524	
Fluid temperature range (NBR / Viton)	°C	-30 ... +80 / -20 ... +80
Ambient temperature, max.	°C	+50
Viscosity range	mm ² /s	20 ... 400
Maximum degree of fluid contamination	Class 21/18/15 according to ISO 4406	
Nominal flow rate Q_n at $\Delta p = 10$ bar ($v = 32$ mm ² ·s ⁻¹)	L/min	15 / 30
Hysteresis	%	≤ 6
Weight PRM2-062	kg	1.9
PRM2-063		2.40
Mounting position	unrestricted, preferably horizontal	
Enclosure type EN 60 529	IP65	

Technical Data of the Proportional Solenoid

Type of coil	V	12 DC		24 DC
Limit current	A	2.5	1.6 (12 V electronic)	1.0
Resistance at 20 °C	Ω	2.3	5.2 (12 V electronic)	13.4

Technical Data of the Electronics

Nominal supply voltage U_{cc}	V	12 DC	24 DC
Supply voltage range	V	11.2 ... 14.7	20 ... 30 DC
Stabilized voltage for control	V	5 DC ($R > 1k\Omega$)	10 DC ($R \geq 1k\Omega$)
Control signal	see table of switches configuration (page 6)		
Maximum output current	A	2.4 for $R < 4\Omega$	1.5 for $R < 10\Omega$
Ramp adjustment range	s	0.05 ... 3	
Dither frequency	Hz	90/60	
Dither amplitude	%	0 ... 30	

Limit power

Measured at $v = 32$ mm²/s $P \rightarrow A / B \rightarrow T$ or $P \rightarrow B / A \rightarrow T$

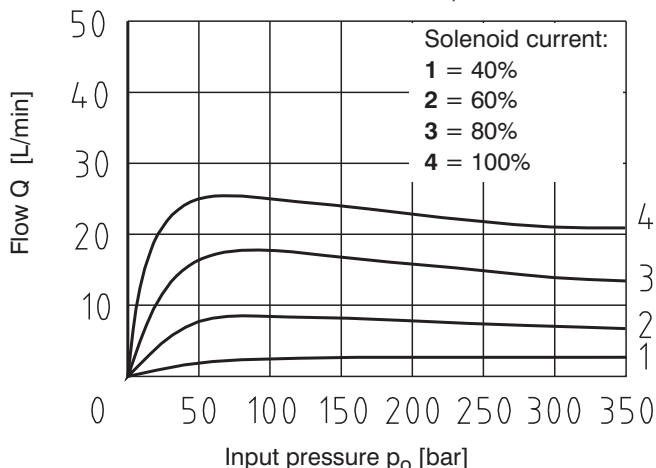

Nominal flow 5 L/min

Nominal flow 8 L/min

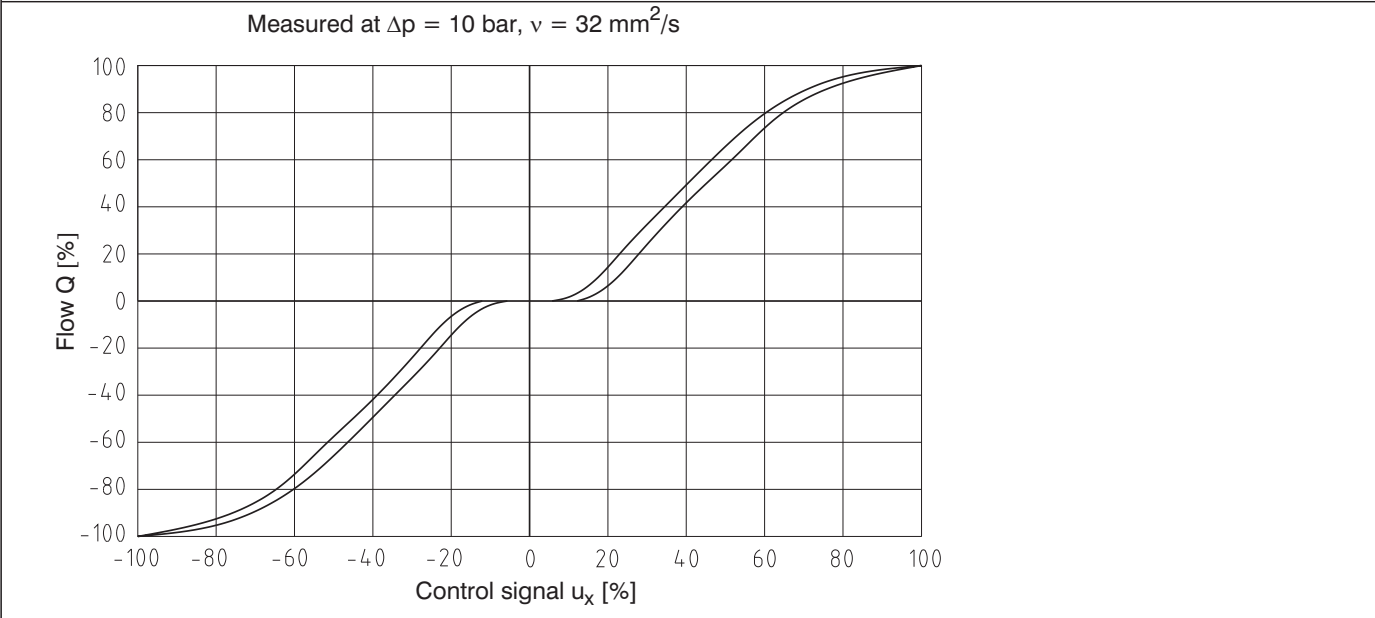

Nominal flow 15 L/min

Nominal flow 30 L/min

Flow Characteristic with Integrated Electronics

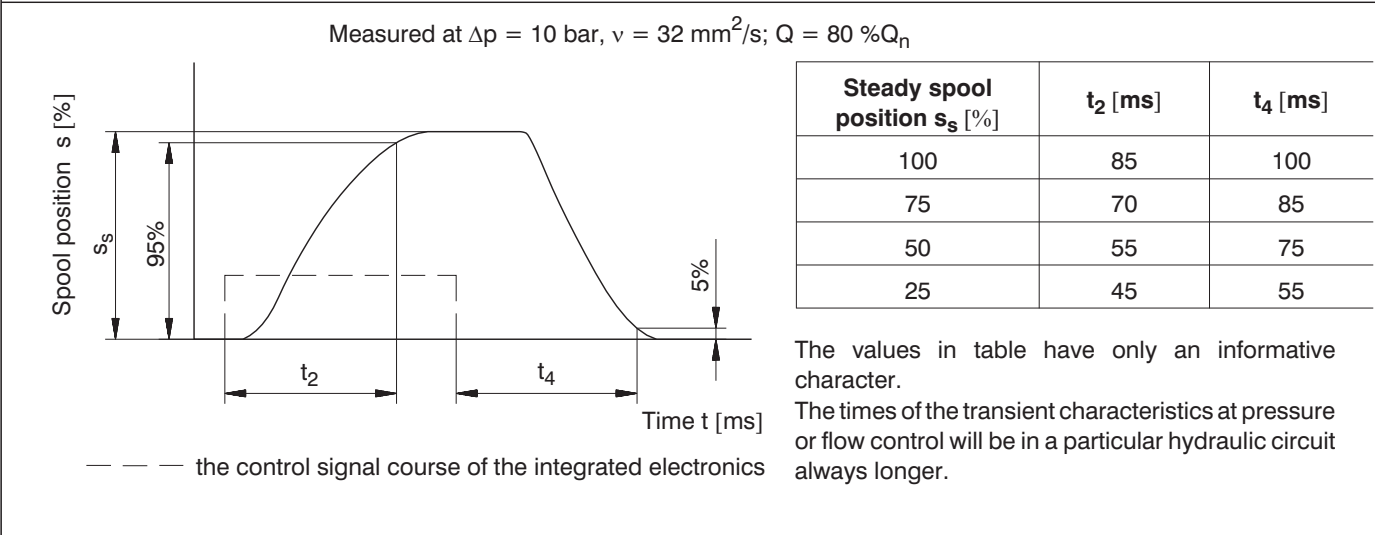

Flow Characteristic without Integrated Electronics

The coil current which initializes the flow through the proportional directional valve can differ due to the production tolerances about in a range of $\pm 6\%$ of the limit current.

Transient Characteristic

Frequency Reponse

Valve PRM2-062 (with one solenoid)

1 Factory setting

1.1 Control with external voltage source 0 ... 10 V (0 ... 5 V) or with external potentiometer $R > 1 \text{ k}\Omega$

Notice:

The control signal must have the same ground potential as the supply source.

Master card for solenoid a (b)

Wire colours (connection connector - electronics):

- (1) - brown
- (2) - white
- (3) - blue
- (4) - black

Factory set values:

Control signal: 0 - 10 V (0 - 5V)

Dither: frequency 90Hz
amplitude - optimum

Ramps: 0.05 s

Offset, Gain: according to the characteristics on page 3, 4

Valve PRM2-062 (with one solenoid)

2 Other control possibilities

2.1 Control with external source 0 ... 5 V

Notice:

The control signal must have the same ground potential as the supply source.

Master card for solenoid a (b)

For the factory setting modification for this case of application, the following steps are required:

1. Unscrew the electronics cover
2. Carefully remove the Master card
3. Flip the switch SW3 in position shown in the picture
4. Put in the Master card and fix the electronics cover
5. Connect the voltage +24 V from an external supply source to terminals 1 and 3 of the connector
6. Connect the control voltage 0 ... 5 V from an external source to terminals 2 and 3 of the connector

Valve PRM2-062 (with one solenoid)

2.2 Control with external source 0 ... 20 mA

Notice:

The control signal must have the same ground potential as the supply source.

Master card for solenoid a (b)

For the factory setting modification for this case of application, the following steps are required:

1. Unscrew the electronics cover
2. Carefully remove the Master card
3. Flip the switch SW1 and SW3 in position shown in the picture
4. Put in the Master card and fix the electronics cover
5. Connect the voltage +24 V (+12 V) from an external supply source to terminals 1 and 3 of the connector
6. Bring the control current 0 ... 20 mA from an external source to terminals 2 and 3 of the connector

Valve PRM2-062 (with one solenoid)

2.3 Control with external source 4 ... 20 mA

Notice:

The control signal must have the same ground potential as the supply source.

Master card for solenoid a (b)

For the factory setting modification for this case of application, the following steps are required:

1. Unscrew the electronics cover
2. Carefully remove the Master card
3. Flip the switch SW1, SW2 and SW3 in position shown in the picture
4. Put in the Master card and fix the electronics cover
5. Connect the voltage +24 V (+12 V) from an external supply source to terminals 1 and 3 of the connector
6. Bring the control current 4 ... 20 mA from an external source to terminals 2 and 3 of the connector

Valve PRM2-063 (with two solenoids)

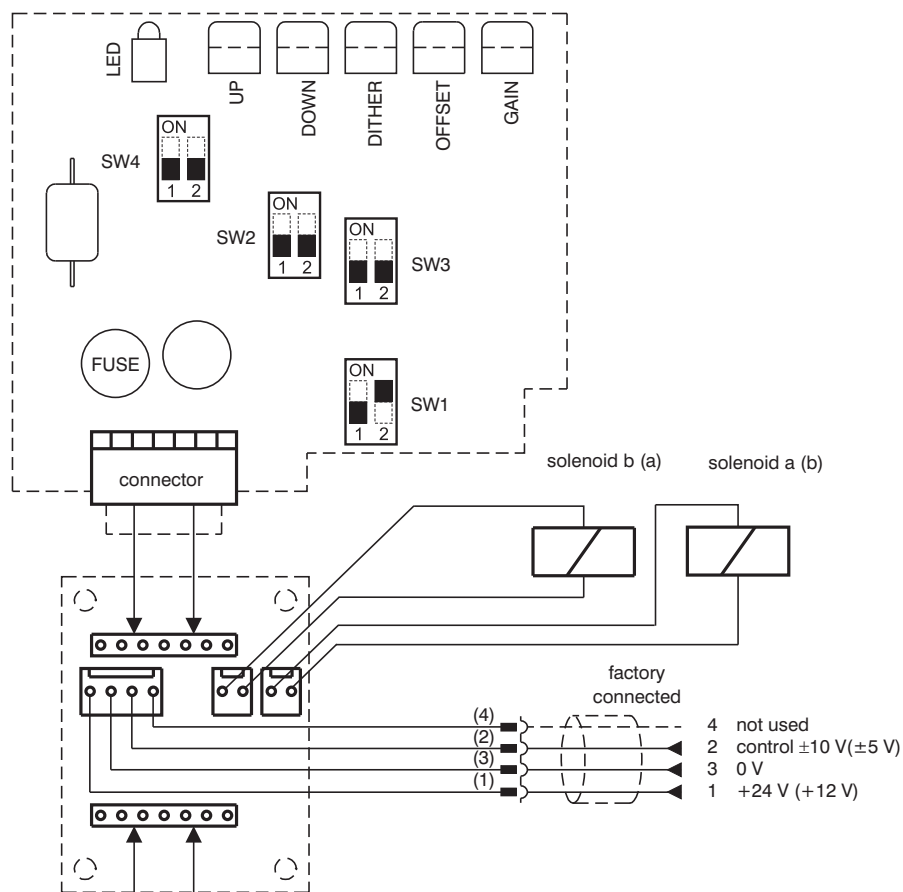

3 Factory setting

3.1 Control with external source $0 \pm 10 \text{ V}$ ($0 \pm 5 \text{ V}$)

Notice:

The control signal must have the same ground potential as the supply source.

Master card for solenoid a (b)

Slave card for solenoid b (a)

Factory set values:

Control signal: $0 \pm 10 \text{ V}$ ($0 \pm 5 \text{ V}$)

Dither: frequency 90 Hz
amplitude - optimum

Ramps: 0.05 s

Offset, Gain: according to the characteristics on page 3, 4

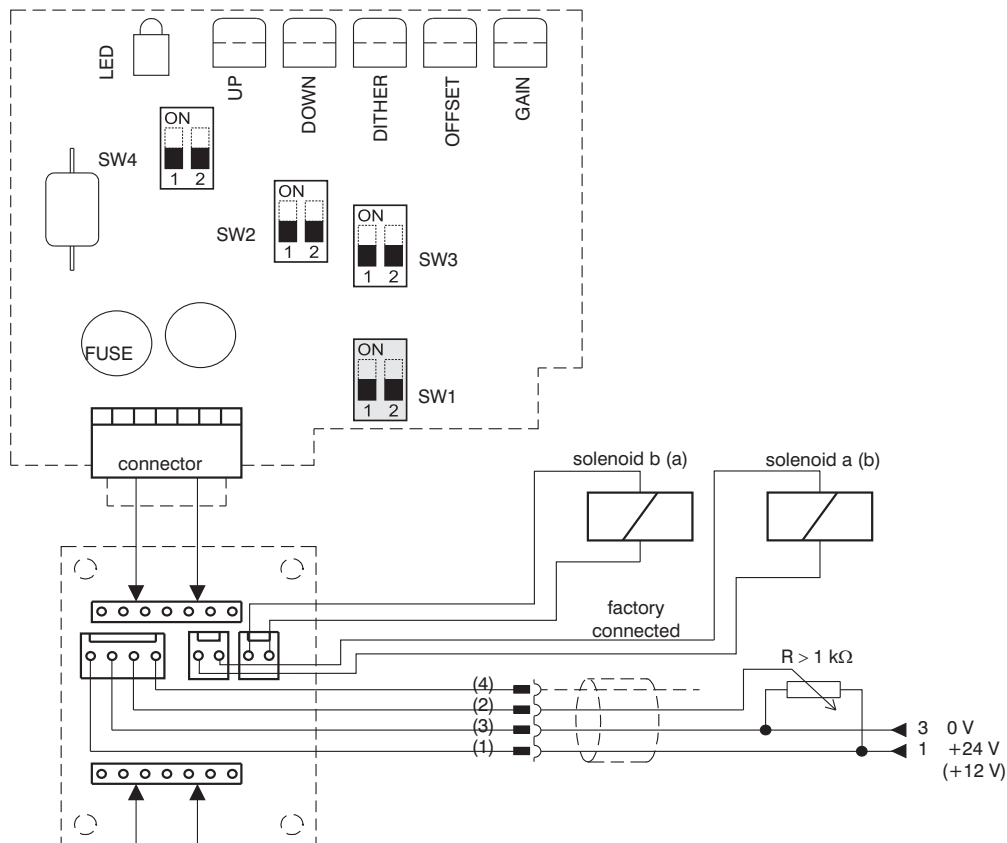

Valve PRM2-063 (with two solenoids)

3.2 Other control possibilities

Control $U_{cc}/2 \pm 10 \text{ V}$ ($U_{cc}/2 \pm 5 \text{ V}$) external potentiometer $R > 1 \text{ k}\Omega$

Master card for solenoid a (b)

Slave card for solenoid b (a)

For the factory setting modification for this case of application, the following steps are required:

1. Unscrew the electronics cover
2. Carefully remove the Master card
3. Flip the switch SW1 in position shown in the picture
4. Put in the Master card and fix the electronics cover
5. Connect the voltage +24 V (+12 V) from an external supply source to terminals 1 and 3 of the connector

Ramp Adjustment (Up, Down)

Notice: The factory setting of the ramp functions is to the minimum values.

*The value has only an informative character with respect to the particular type of the proportional directional valve (see page 4)

Ramp adjustment for Master solenoid

Ramp adjustment for Slave solenoid

Dither Adjustment

Notice: The dither is adjusted with regard to the minimum hysteresis.

Amplitude - potentiometer (dither) (0 - 30 %)

Frequency - switch SW4

90 Hz

60 Hz

Amplitude adjustment for Master solenoid

Amplitude adjustment for Slave solenoid

Adjustment of Offset, Gain Parameters

Notice: The factory setting of the Offset and Gain parameters is specific for the solenoids used.
The manufacturer does not recommend this setting to be changed.

Nominal supply voltage of electronics [V]	Area insensible to control signal u_{xx} [%]
12	1 ... 3
24	0.5 ... 2
