4/2 and 4/3 Directional Control Valve, Solenoid Operated

Technical Features

RPE3-06

Size 06 (D03) • Q_{max} 80 l/min (21 GPM) • p_{max} 350 bar (5100 PSI)

Direct acting, directional control valve with subplate mounting interface acc. to ISO 4401, DIN 24340 (CETOP 03)

- > High transmitted hydraulic power up to 350 bar with optimized design to minimize pressure drop
- Five chamber housing design with reduced hydraulic power dependence on fluid viscosity
- > The valve is available with interchangeable DC solenoids, also for AC power supply using a built-in rectifier bridge
- Wide range of solenoid electrical terminal versions available
- Wide range of interchangeable spools and manual overrides available
- > CSA Certificate upon request 🛞
- Inductive contactless Normally Open and Normally Closed spool position sensor option
- > Soft-shift spool speed control option
- > The coil is fastened to the core tube with a retaining nut and can be rotated by 360° to suit the available space
 - In the standard version, the valve housing is phosphated for basic surface corrosion protection and
- as preparation for painting. Steel parts are zinc-coated for 240 h salt spray protection acc. to ISO 9227 Enhanced surface protection for mobile sector available for the valve housing and steel parts (ISO 9227, 520 h salt spray)

ISO 4401-03-02-0-05

- For directional valves with two solenoids, one solenoid must be

de-energized before the other solenoid can be charged.For AC voltage supply use coils with connector type E5.For other solenoid voltage supply options see data sheet C_8007.

see data sheet K_8008 - The orifice to the P port can be ordered separately, see data sheet SP_8010.

- Mounting bolts M5 x 45 DIN 912-10.9 or studs must be ordered separately. Tightening torque is 8.9+1 Nm (6.56+0.7 lbf.ft).

Besides the commonly used valve versions shown other special models are available.
 Contact our technical support for their identification, feasibility and operating limits.

Spool Position Sensor

S1 - Circuit diagram for the normally - OPEN sensor

S4 - Circuit diagram of the normally - CLOSED sensor

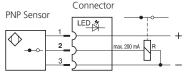

Two-Po

①a(b)

0

Signal of solenoid Signal of sensor

 $\Theta \otimes$

Function of the position sensor:

In the basic position (when the solenoid is switched off), a steel core, connected to the spool, is under the position sensor. The sensor is activated, it means contacts of the sensor \$1 are closed and contacts of the sensor \$4 are open. After switching on the solenoid the spool with core moves out of the sensor range and the sensor is deactivated.

	V mA bar (PSI) Hz °C (°F) V

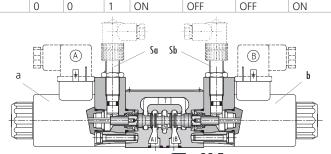

Typical configurations of the valve with a sensor:

3-position valve with two solenoids, equipped with two sensors

2-position valve with one solenoid, equipped with one sensor on the solenoid side 2-position valve with a detent assembly of spool, equipped with one sensor on the side of the solenoid which moves the spool from the basic position to the switched position according to the spool symbol **Note:** the sensor always indicates the change of spool position realised by the energised solenoid, mounted on the side of the sensor.

Spool Speed Control in millimeters (inches)

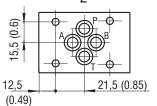

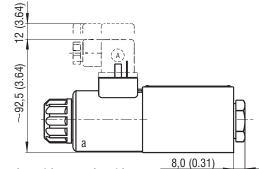

This directional valve provides the means to control spool soft shifting by an orifice situated in the solenoid armature. To ensure the proper function of the valve, unobstructed venting of the solenoid is required through the bleeding plug (1). The plugs are accessible after removing the rubber boot (2) from the solenoid cap nut (3).

The switching times shown are valid for viscosity $v = 32 \text{ mm}^2/\text{s}$ (156 SUS) and nominal voltage. They depend on working pressure and flow rate of the directional control valve.
